

No Food Waste

Millions of tons of food are wasted every day. One third of all food is spoiled or wasted before consumption, even as billions go hungry daily. Thus, reducing food waste and ensuring that surplus food is distributed to people in need.

The key messages here are:

Reducing Food Waste

Educating citizens about strategies to reduce food waste, such as consuming consciously, repurposing leftover food, and storing food properly to drastically reduce wastage of food.

Sharing Surplus Food

Collecting and then distributing surplus food to beneficiaries in a timely manner can help fight hunger. A network of agencies and awareness among people can help put this into practice.

The Indian Food Sharing Network (IFSA) is an initiative of FSSAI and Food Sharing Networks across India who come together to reduce food waste and hunger and redistribute surplus food through structured systems. The objective is to provide policy, regulatory, strategy and programme support through coordinated efforts and create a platform where surplus food recovered through registered agencies is redistributed to those in need.
