

Emerging Challenges in Food Safety
Webinar Series | Aug-Dec 2022

Food testing laboratories take their regulatory and business duties to screen their products for potentially dangerous pathogens, such as Salmonella, Shiga toxin-producing Escherichia coli (STEC), and Listeria, seriously. Every business is unique, but all share a common aim - to increase productivity without compromising on safety. Staff time is the most precious resource in any laboratory, wherever your work falls on the food supply chain. This webinar will highlight the microbial safety analysis and illustrate ways of tackling them in the most efficient way.

Do you have queries about these topics? There will be time to ask our experts at the end of the session. Can't make this time, register anyway and we will send you links to the recorded sessions automatically

Register Now**Power up Pathogen testing****November 17, 2022, Thursday | 11:00 am - 12:00 noon****Speakers****Dr. Lalitha Gowda**

Chief Scientist (Rtd), CSIR-Central Food Technological Research Institute, Mysore
Member, Scientific Committee, FSSAI, India
Chair, Scientific Panel on GM-Foods, FSSAI, India
Member, Genetic Engineering Appraisal Committee, MoEF&CC, GoI

**Dr. Indranil Chatterjee**

Application Scientist-Microbiology
Thermo Fisher Scientific
